

CHEST ARMOR

Modern Chest Armor Guide

MODERN

Spacing between plates is required for this style. The exception to this rule is Rebels and Galaxies style chest armor where the chest plates and chest diamond can be fused.

LEGACY

Legacy plates are unified pieces of overlapping armor. No gaps between plates are permitted for this style.

PILOT

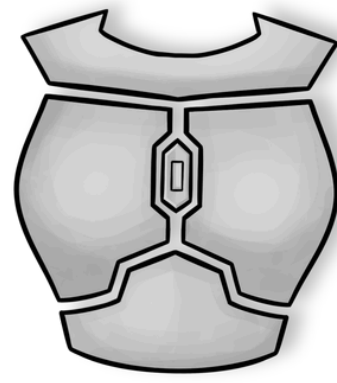

Pilot is the only style of modern plates that may omit the chest diamond so long as the life support box covers the space. Plates can be Modern or Modern: Legacy style.

NOTE

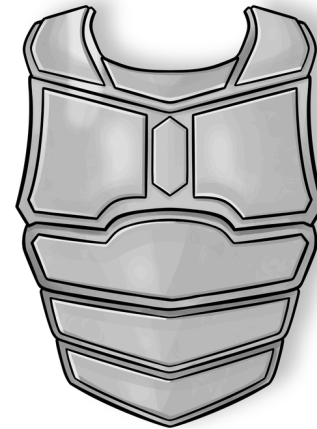

*Modern chest armor can be customized and does not have to match canon reference so long as the CRLs of the chosen style are upheld.
